

## WHAT IS CLAIMED IS:

1. A cosmetic container having a hinge portion coupled rotatably to a container body and comprising a lid which opens and closes the container body, the cosmetic container being  
5 characterized by comprising:

a replacement cover provided replaceably on the lid to cover it;

a through hole formed in the hinge portion towards the replacement cover;

10 an engaging body formed inside the through hole; and

an engageable body formed in the replacement cover and inserted into the through hole to engage engageably/detachably with the engaging body.

15 2. A cosmetic container having a container body and a lid to open and close it, the cosmetic container being characterized by comprising:

a replacement cover provided replaceably on an outer surface of at least one of the lid and the container body to cover it;

20 a first groove formed by recessing from an outer surface side of the lid or the container body;

an engaging portion formed inside the first groove;

an engageable portion which is flexibly deformable and formed on the replacement cover, and inserted in the first groove  
25 and engageably/detachably engaging the engaging portion; and

a second groove formed by recessing from an inner surface side of the lid or the container body and connected to the first groove, to exert operating power to the engageable portion to flexibly deform the engageable portion engaged to the engaging  
30 portion inside the first groove in order to break off from the

engaging portion.
